# Wytron Professional DVD controller
= The Best products you can find all over the world =

★ **IDE bus type:**   **DVD-688** :10 – target IDE Bus controller

★ **SATA bus type:**

DVD-899 :12 – target SATA Bus controller   **DVD-898** : 5 – target SATA Bus controller

Common features for all lines of product

High reliability and durability

With best tradition, Wytron controllers are designed to be high reliability and durability which can work continuously in duplication with all day long without failure. Compared to the short life of those competitors' controller cards, the high durability of Wytron controllers is so impressive and it is absolutely worthy to be the controller of your duplicator.

High compatibility with writers

Max. connection compatibility for CD/DVD/Blu-Ray writers in the market such as Pioneer, Asus, BenQ, LG, Lite-ON, NEC, Sony, etc. All are available Wytron controllers and there is no special firmware required to connect any specific writer. Blu-ray writers are also supported directly. No special firmware or additional cost is needed.

Independent design

All ports on Wytron controllers are fully independent, one for master and others for target drives. The master device can be either SATA hard drive or CD/DVD/Blu-Ray Combo reader/writer. Through independent design, each port will then have its maximum bandwidth to run at the highest burning speed.

Firmware upgradable to suit future's requirement

BIOS firrmware can be easily upgraded to suit the latest CD/DVD/Blu-Ray writers released in the market. Above all, "One ring to rule all", Wytron's controllers are always fitted with one universal BIOS that suitable for all writers and is not releasing special firmware for specific writer to cause inconvenience for customers, unlike the way of one firmware for one writer in the competitor's controller card.
